

Flow Sensor Cable

For use with SLE flow sensors

For use with:
SLE6000, SLE5000, SLE4000

The flow sensor cable is suitable for use with SLE single-patient and reusable flow sensors.

The cable has been designed to include an over-moulded ergonomic grip for its removal and placement during connection to the flow-sensor. It is moulded in blue PVC containing a biocidal agent, plus it is resistant to odours, mould and mildew.

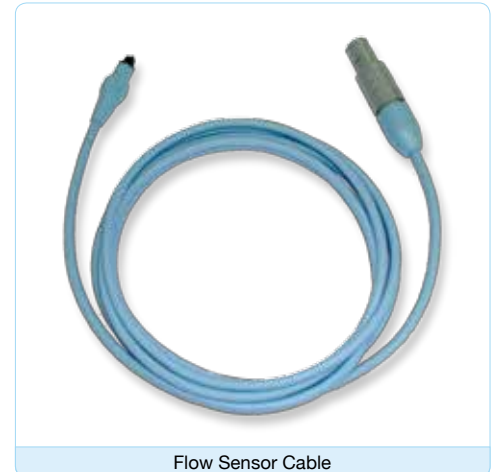

Additional strain relief is incorporated into both ends of the cable, particularly the ventilator end to improve support for the cable whilst connected to the ventilator.

- New blue colour improves recognition
- Cable moulded in PVC includes a biocidal compound
- Dual finger grips for easy insertion and removal from flow-sensor
- Improved strain relief at both end of the cable
- Locking ventilator connector for added security

Technical Specifications:

- Length: 200 cm
- Material: PVC
